

How to Read a Climagraph - Hemispheres

A climagraph is a special kind of graph. It shows the average temperature and total precipitation (rain and snow) in each month at a place.

From this graph, you can see if the people in a place need furnaces, air conditioners, irrigation for their crops, or sprinklers for their lawns.

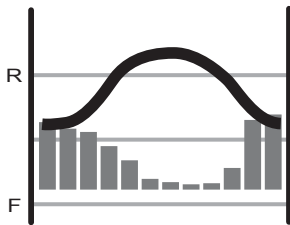

Focus on the temperature curve.

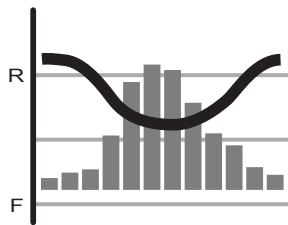

Here is the climagraph for Detroit:

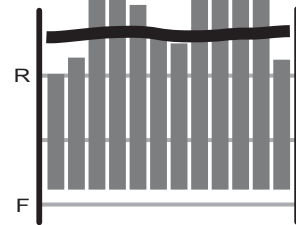

A

B

C

- Which of these three climagraphs (circle: A B C) is from Congo, near the equator? Why do you think so?
- Which climagraph (A B C) is from Casablanca, in the northern hemisphere? Why do you think so?
- Which climagraph (A B C) is from Capetown, in the southern hemisphere? Why do you think so?
